DETAILED ACTION

Allowable Subject Matter

1. Claims 9 and 14 are allowed.
2. Claims 5 and 13 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Kadota

("Combination of zno film and quartz to realized large coupling factor and Excellent Temperature Coefficient for the Saw device" IEEE 1997 UltraSonic Symposium).

Kadota discloses a surface acoustic wave device(page 263) comprising: a quartz substrate; a piezoelectric thin film(zno) disposed on the quartz substrate; comb electrodes disposed between the quartz substrate and the piezoelectric thin film.

Wherein, the normalized film thickness H/λ_s , of the piezoelectric thin film is at least about 0.20, wherein the film thickness of the piezoelectric thin film is H, and the wavelength of the surface acoustic wave is λ_s ,

Referring to claims 3-4,6-8 and 10-12

Kadota also discloses a quartz substrate wherein, the piezoelectric thin film contacts the substrate and the comb electrodes at the negative surface. Kadota also discloses, the comb electrodes comprising a short-circuit electrode disposed on the piezoelectric thin film. Wherein, the Euler angles of the quartz substrate are within the range such that the temperature coefficient of frequency TCF(having a negative value) of the surface acoustic wave device is within about : ± 25 ppm/ $^{\circ}$ C, ± 5 ppm/ $^{\circ}$ C and the electromechanical coefficient of the Rayleigh wave is no smaller than about 0.8% and not larger than $\pm 1^{\circ}$ (pages 261-266)

Response to Arguments

4. Applicant's arguments with respect to claims 1 and 3-14 have been considered but are moot in view of the new ground(s) of rejection.
